

July 1, 2015

## PROJECT OF THE MONTH

This project uses product TUS 008 from LaserBits called the **Product Template CD**. This CD has layouts for nearly the entire LaserBits product line. As shown below, the layout is for one of our awards. All I had to do was add the text!

I then sent the vector line to the laser at a high speed and low power to cut through masking material. This provided me the correct placement for the plaque plate.

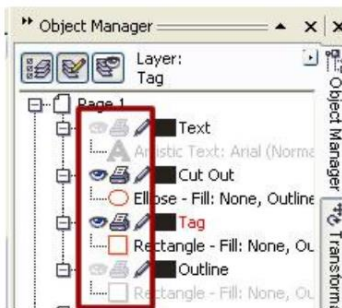

## FEATURE: COURSE HIGHLIGHT

For more information about this project visit **The Project Center** and locate **Product Template CD**.

After engraving comes assembly!

## Corel Skills

The Object Manager allows you to control all of the layers in your layout. From this tool, you can:

- 1) Select layers to print.
- 2) Select layers to be visible.
- 3) Lock layers from editing.

## YOU TUBE VIDEO OF THE MONTH
