

What's New?

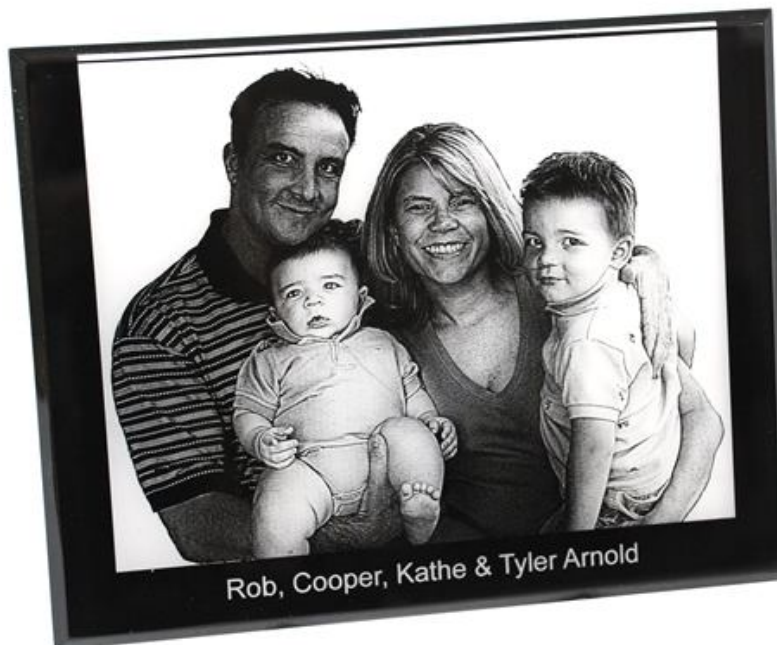

Recently I have had several emails asking me how to get rid of that annoying white box that sometimes engraves around cutout images. All the engraver wants is the image and not a white box around it. I have now added a lesson in the Corel Center to help you remove that unwanted portion! It is highlighted below in our Spotlight section.

Don't forget that last month we added a discussion forum inside LaserU. It has seen a little traffic but not as I had hoped. I think you can really benefit from being able to interact with each other in this area. Give it a Go! Please visit and start posting and answering questions. You can find the link labeled **LaserU Forum** at the bottom of the left panel of links.

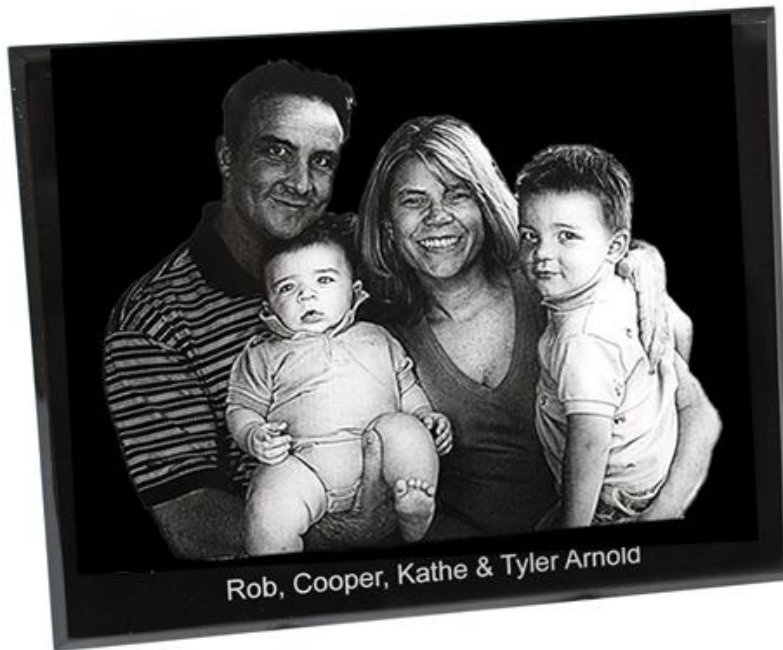

Laser Spotlight

Each month we showcase an item, product or skill from LaserU. We give a summary of the item and provide links for more information. This month we will look at **Removing White Boxes**. For more information you can see the **Corel Center PHOTO-PAINT** lesson titled **Removing white boxes around images**.

Example of what you DON'T want

The Correct Way

For more information on how the above was completed, visit LaserU's **Corel Center** and see PHOTO-PAINT item titled Removing white boxes around images

Please send questions and comments to laseru@laserbits.com

See you next month with our next **The Laser Engraver** Newsletter.
