

Greetings:

I am SO excited to share our newest product with you. We demo'ed it in Las Vegas and it won [Best New Technology Award](#) from the ARA! Woo-hoo! It is called LiquaMASK and you need to check out this product!

Laser Spotlight

Each month we showcase an item, product or skill from LaserU. We give a summary of the item and provide links for more information. This month we will look at **LiquaMASK**. This comes from our Project Center titled - **LiquaMASK**.

Here are a few quick tips & images, [but please see the Project Center for more detail & information.](#)

Advantages:

- Apply the LiquaMASK weeks ahead of time**
- Never damages the substrate with adhesive residue**
- No changes to speed or power settings**
- No lifting or curling**
- No air pockets**
- Water soluble – washes right off fingers & brushes**
- Works on any shape surface since it is brushed on (i.e. curved surfaces)**
- Very little waste as it is applied exactly where needed**
- Weeding out the extra LiquaMASK from the insides of letter is easier than other masking materials.**
- No adhesive residue due to melting from the heat of the laser like other products that have an adhesive backing.**
- When using color fill it won't accidentally seep underneath the material since LiquaMASK does not allow gaps between it and the substrate.**
- LiquaMASK can be used on items that will receive *light* sandblasting.**
- Cost effective – about a penny per square inch!**

Do you need another reason? It couldn't be any easier!

- 1) Apply LiquaMASK**

2) Engrave as usual (no adjustment to settings needed)

3) Peel off - residue and all!

4) Look at the easy clean up!

5) Finished product!

For more information on this, see **LiquaMASK** in the **Project Center**.

Please send questions and comments to laseru@laserbits.com

See you next month with our next **The Laser Engraver** Newsletter.
