

Greetings:

I hope all is well with you this month. We are very busy at LaserBits and LaserUniversity. My biggest project, at the moment, is working on Course 18 for the Learning Center. My hope is to be able to launch it May and feature it here in our June newsletter. It is all about AlumaMarkand let me tell you I have been finding new and exciting uses for this amazing product. So stay tuned!

Laser Spotlight

Each month we showcase an item, product or skill from LaserU. We give a summary of the item and provide links for more information. This month we will look at **EngraveLab**. This comes from our Learning Center titled - **Course 18** and the Project Center titled **EngraveLab Processing Photos** and **EngraveLab Photo/Vector**.

EngraveLab is a very versatile product. In the Learning Center & Project Center we explore how to process photos, vectorize patterns, bar code, create serialized parts and coming in Course 18, how to create 2D Data Matrix codes! Below are a few sample images from our lessons.

For more information on this, see **EngraveLab** in the **Project Center** and **Learning Center**.

Please send questions and comments to laseru@laserbits.com

See you next month with our next **The Laser Engraver** Newsletter.

Kathryn
